

**Metal Sounds -
Spacedrum Evolution® and Spacedrum Nitro®**

In 2006 the french musical instruments maker Philippe MAIGNAUT collaborated with Cédric AIME and Marc GUILLIOU from DJOLIBA Music Store (Toulouse, France) on a research and development program that resulted 2 years later in the design of the Spacedrum®, followed in 2011 by the formation of their new company, METAL SOUNDS.

Metal Sounds offers quality musical instruments, original creations such as Zenko® and Spacedrum®. Our instruments all enjoy special care and a standardized and optimized production process. Forming, cutting, assembly and tuning, and all finishes are made in our workshops (unless otherwise stated). Each instrument is finely tuned, with several ranges and frequencies available through a strobotuner called Linotune® allowing precision tuning.

You can play alone, or with someone else, with the instrument on your knees or on a stand. You can even turn it over and play with the sound-hole in a "Udu style".

Spacedrum Evolution 24", 8 notes \$2399

- **LOW HITZAZ**
